Welch-gated genes, 96 h, full raw covariance: distance 3.33 by QP, 6.55 with refined means
Small points: the three standard-Wnt replicates; large point: their mean. Stages are fitted from top to bottom; each starts from the previous one.
48 h
72 h
96 h
QP, within-type covariance
QP, total covariance
QP, Huber weights
QP + refined means
QP + means + gene variances
then full likelihood
